Product manual

Cow obstetric apparatus is a kind of device widely used in the cattle breeding industry. Its main function is to take the yak out of the mother body in the fastest time, thus reducing the suffocation caused by the yak in the mother for a long time. Such problems, while also reducing the pain of the mother cattle in the production process, can further reduce the probability of the cow's postpartum series syndrome. During the process of childbirth, the cow has had difficulty, and it is difficult to discharge the baby smoothly. If the dystocia is not handled properly. It can cause bovine reproductive diseases, and there may be infertility in the future, and may even cause the death of the fetus and the female animal. Cow obstetric apparatus is a good tool to reduce this risk.
