Product Description

Hoof Repair Team Wooden Hoof Pad 77G 11×5×2cm Redo-Bond 200ml 322G 25T

Product Description:

Dairy hoof rot is a disease in which the soft tissues and skin between the hooves of affected animals become septic or putrid, causing their hoof keratin to dissolve, mainly as a result of impaired movement, and causing health problems for cows with dairy hoof rot. Occlusion therapy combined with self-adhesive bandages has a good therapeutic effect in the treatment of hoof rot in dairy cows. It can effectively purify the inflammation of the affected hoof, speed up the healing of the affected hoof, and prevent it from environmental pollution from external sources. At the same time, it improves the pain of the hoof.
