Product Description

Herringbone Milking ACR Automatic Cluster Removers For Milking Parlor

Quick Detail:

- Could be used in all kinds of milking parlor/milking hall.
- Reasonable structure and beautiful appearance;
- With good quality and reasonable price.
- Two controller be offered to choose;

Description:

- ACR automatic cluster removal system is used to control the automatic falling cup of the milking device and cleaning condition. It can directly control the pulsation frequency and massage manually or automatically.
- ACR automatic cluster removal system will allow the cluster to be connected to the cow udder, and continuously monitor milk flow, and at the right level of milk drop off it should remove the unit in a gentle manner. This will ensure that each animal is milked out correctly every time, and prevent under milking or over milking.
- ACR automatic cluster removal system consists of control valve, cylinder, flow sensor, controller and fixed parts.

Features:

- Help in getting the best milk production and at the same time keeping the animal in good health.
- This removal technique is extremely sensitive and animal-friendly. At the same time, removing the milking equipment with an electronic motor saves space in the barn. Over-milking and blind milking will be things of the past.
- An efficient and labor-saving upgrade product;

Functions:

- Bionic Intelligent massage function;
- Adjustable milk-let-down delay;
- Milk flow monitoring with accurate sensor technology;
- Automatic sucking milk after dropping;
- Pulse adjustable function;
- Warning display function;
- Automatic or manual control function;

Applications:

1. used in milking parlor/milking hall;
2. used to control the automatic falling cup of the milking device;
3. used to control the cleaning condition of the milking equipment;
4. be suitable for divided-flow milking equipment;
5. be suitable for electronic measuring milking equipment;
