

Cows / Goat Animal - Friendly Automatic Cluster Removers With Control Valve , Cylinder

Our Product Introduction

Basic Information

- Place of Origin: China (Mainland)
- Brand Name: HL
- Model Number: HL-P10
- Minimum Order Quantity: One set
- Price: Negotiation
- Packaging Details: Carton
- Delivery Time: 20-30 days
- Payment Terms: T/T
- Supply Ability: 500sets/Month
- Warranty: One year

Product Specification

- Highlight: milking cluster, dairy cluster

Product Description

Cows / Goat Animal - Friendly Automatic Cluster Removers With Control Valve , Cylinder

Quick Detail:

- Components: control valve, cylinder, flow sensor, controller;
- Two controller be offered to choose;

Description:

Automatic Cluster Removers System is used to control the automatic falling cup of the milking device and cleaning condition. It can directly control the pulsation frequency and massage manually or automatically. It will allow the cluster to be connected to the cow udder, and continuously monitor milk flow, and at the right level of milk drop off it should remove the unit in a gentle manner. This will ensure that each animal is milked out correctly every time, and prevent under milking or over milking.

Features:

1. Could get the best milk production and keep the animal in good health.
2. This removal technique is extremely sensitive and animal-friendly.
3. Removing the milking equipment with an electronic motor saves space in the barn.
Over-milking and blind milking will be things of the past.
4. An efficient and labor-saving upgrade product;

Applications:

The automatic cluster removers system usually been used in milking parlor / milking hall.
