Veterinary Instruments Stainless Steel Castration Plier, Burdizzo Style, 32cm Length Livestock Lamb Goat Emasculator Banding

Product Description:

- The bloodless castrator is a scientific veterinary surgical instrument.It is suitable for castration of livestock such as bulls,bulls and pigs.
- The device achieves the purpose of surgery by clamping the animal spermatic cord through the scrotum of the ivestock,and does not need to incision on the scrotum of the livestock,so it is called"no blood castration".

Why choose bloodless castration forceps?

Using bloodless castration forceps for male livestock castration surgery has the following advantages compared to traditional surgical castration methods:

Easy to operate, surgeons only need short training to master the usage skills, while traditional surgical castration requires specially trained veterinarians to perform.
It has good safety because it eliminates the need to cut the scrotum during surgery, thereby reducing the risk of wound infection and avoiding the danger of tetanus infection causing livestock death after surgery.
Post-operative care is simple; using bloodless castration forceps on animals after castration eliminates the need for special care after surgery to avoid complications.

Features:

-The gap between the jaws is tight,the success rate of the operation is high.
- Selected high quality stainless steel,excellent workmanship.
- Non-slip design,easy to use (the end of the handle is anti-slip sleeve).

Competitive Advantage:

- Wide range cows farm equipment: headlock, free stall and hutch;
- Reliable quality and excellent products
- Sample is avaiable
- Lifetime technical service support
