### Product Description:

The Dairy Cleaning Supplies product, named Teat Dip Cup With Brush, is an essential tool for maintaining the cleanliness and hygiene of dairy equipment in farm milk houses. This product features a black color, soft brush that is gentle yet effective in cleaning teat surfaces. The cover of the dip cup comes in a vibrant blue color, making it easily visible and adding a pop of color to your cleaning routine. Designed specifically for dairy equipment, this Teat Dip Cup With Brush helps in sanitizing and disinfecting milking tubes, teats, and other surfaces to ensure the health and safety of livestock. The combination of a medicined bath before and the use of the brush helps in thorough cleaning and removal of dirt, bacteria, and other contaminants. When it comes to farm milk house sanitizers, Livestock Hygiene Detergents, and milking tube brushes, this product stands out for its quality and effectiveness. The soft brush ensures a gentle yet deep cleaning action, while the teat dip cup allows for easy application of sanitizing solutions. Whether you are a small-scale dairy farmer or a large commercial dairy operation, having the Teat Dip Cup With Brush as part of your cleaning supplies is crucial for maintaining high standards of cleanliness and hygiene. Regular use of this product can help prevent the spread of diseases, improve milk quality, and ensure the well-being of your livestock. Investing in the right dairy cleaning supplies is essential for the overall success of your dairy operation. The Teat Dip Cup With Brush offers a convenient and effective solution for keeping your dairy equipment clean and sanitized. With its durable construction and user-friendly design, this product is a must-have for any dairy farmer looking to maintain a clean and healthy environment for their livestock. Make the Teat Dip Cup With Brush a part of your dairy cleaning routine and experience the difference it can make in the cleanliness and hygiene of your farm milk house. Say goodbye to worries about contamination and bacterial growth, and say hello to a cleaner, safer, and more efficient dairy operation with this essential cleaning tool.

### Applications:

Chuangpu's Teat Dip Cup With Brush (Model.HL-MP57A) is a versatile dairy cleaning supply designed for various udder care disinfectant applications. Originating from China, this product is specially crafted with PPU bottle material in a vibrant blue color, making it both durable and easily identifiable. One of the key product attributes of the Teat Dip Cup With Brush is its suitability for medicined bath before milking, along with its

functionality with a milking tube brush. This makes it a valuable tool for maintaining animal health care standards and ensuring proper sanitation practices in dairy farms. Whether used for cleaning cow teats before or after milking, this product offers a convenient and efficient solution. The integrated brush enhances the cleaning process, ensuring thorough disinfection and minimizing the risk of contamination. With its practical design and reliable performance, the Teat Dip Cup With Brush by Chuangpu is an essential dairy cleaning supply for farmers and dairy workers. Its versatile nature and effectiveness in udder care disinfectants make it a valuable asset in maintaining a hygienic milking environment.

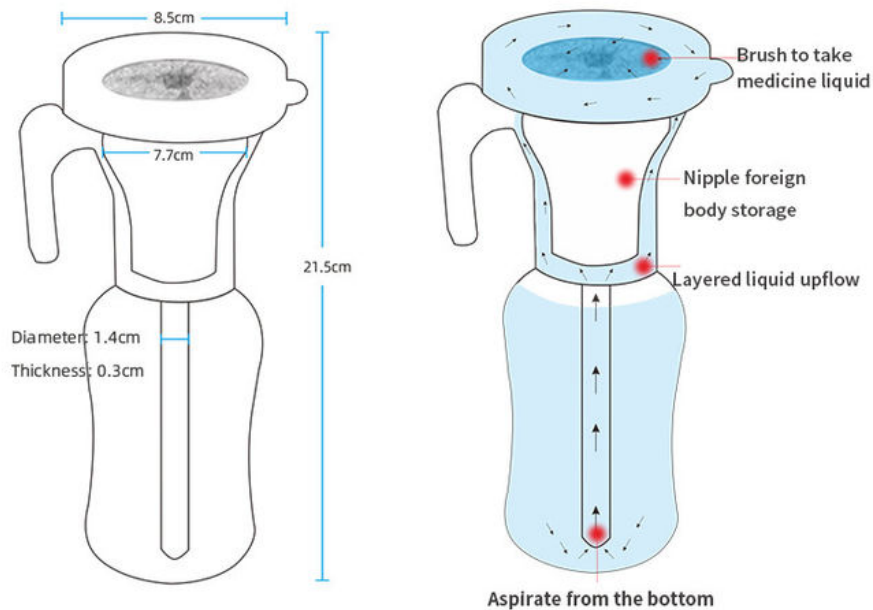

# PRODUCT INTRODUCTION

WE ALWAYS ADHERE TO RIGOROUS MANAGEMENT, THE FOUNDATION OF METICULOUS MANUFACTURING,  
PRODUCE PRODUCTS THAT MEET THEMARKET'S RULES AND CUSTOMER NEEDS

Name: Teat dip cup

Number: HL-MP57A

Introduction: The capacity of 400ML, including the pro drug cup and the posterior bath cup, is composed of the upper cup, the inner sleeve of the cone cup and the gland, which can effectively prevent and treat mastitis.

Pro-drug teat dip brush (Soft)

Posterior teat dip brush (Softer)

## The importance of cows taking medicated baths!

One aspect of good dairy management is to make the body cell content of milk 200,000 / ml. Studies have shown that there is already invisible mastitis in the breast. Therefore, the milk production potential cannot be exerted, and the quality of milk is also affected. In practice, there are many ways to keep the bovine somatic cells below 200,000. It is a very effective method to use the medicated bath after each milking.
