Product Description

The HL-JN10 Cow Milking Machine is a portable milking system that can be configured with 1 to 16 milking buckets. It includes milking units (bucket, liner, teat cup shell, claw, pulsator) and a 250L vacuum pump with oil pot, silencer, belt, and pulley.

Milking time averages 5-6 minutes per cow (shorter for goats). One operator can manage 6-8 buckets simultaneously, saving time and labor costs. The system can be powered by electric motor or diesel/gasoline engine for uninterrupted operation.

Available with transparent milk buckets (25L or 32L) featuring measurement scales for direct milk quantity assessment during milking.
