Product Details

The HL-JN10 bucket milking machine is a portable solution for small cow barns and goat breeding farms. It includes:

- Milking units (bucket, liner, teat cup shell, claw, pulsator)
- 250L vacuum pump with oil pot, silencer, belt, and pulley

The system can milk cows, goats, and sheep by changing the milking cluster group. Milking time varies: 5-6 minutes per cow, shorter for goats. One worker can operate 6-8 milking buckets simultaneously, saving time and labor costs.

Optional transparent milk buckets (25L or 32L) with measurement scales are available. The machine can be powered by electric motor or alternatively by diesel/gasoline engine during power outages.
