

125mm Length Camel Milking Machine Liners with 4,500 To 5,000 Milkings Lifespan

Our Product Introduction

more products please visit us on mobilemilkingmachine.com

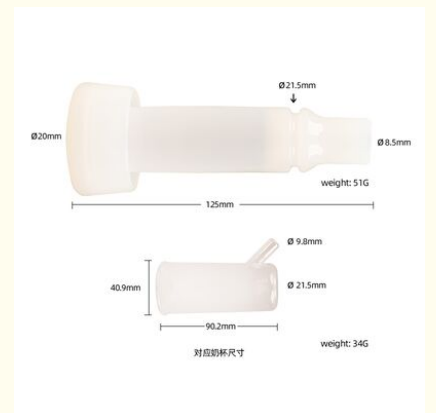

Basic Information

- Place of Origin: China
- Brand Name: Chuangpu
- Model Number: HL-M15C
- Minimum Order Quantity: 1 PCS
- Price: Negotiable
- Packaging Details: Carton
- Delivery Time: 5-8 working days
- Payment Terms: T/T, Western Union, Paypal
- Supply Ability: 5000PCS /Month

Product Specification

- Use: Camel Milking Machine Accessories
- Compatibility: Fits Most Standard Milking Machines
- Length: 125mm
- Lifespan: Typically Lasts 4,500 To 5,000 Milkings
- Weight: 51G
- Installation: Easy To Install And Replace
- Function: Milk Extraction
- Location: The Silicone Inner Liner Inside The Teat Cup Sleeve Directly Wraps Around The Camel's Teat.
- Highlight: **standard milking machine liners, dairy milking system components, milking noise reduction liners**

Product Description:

The Camel Milking Machine Liners are an essential component designed to enhance the efficiency and comfort of the milking process for camels. Specifically engineered to fit most standard milking machines, these liners ensure seamless compatibility with a wide range of milking equipment, making them a versatile choice for livestock owners and dairy farmers. Their universal design eliminates the need for multiple liner types, simplifying maintenance and replacement.

At the heart of the Camel Milking Machine Liners is the silicone inner liner, which is meticulously crafted to directly wrap around the camel's teat inside the teat cup sleeve. This intimate contact ensures a gentle yet effective seal that optimizes milk extraction while minimizing discomfort to the animal. The silicone material offers a soft and flexible fit, adapting to the unique shape and size of each teat to prevent irritation and promote healthy milking conditions.

Measuring 125mm in length, these liners provide ample coverage and support within the milking machine assembly. This length is carefully calibrated to maintain proper suction dynamics and ensure consistent milk flow through the milk extraction tubes. The precision in dimension helps maintain a steady vacuum, which is crucial for efficient milk removal without causing harm or stress to the camel. Functionality is paramount in the design of these milking machine suction liners. Their primary function is to facilitate smooth and effective milk extraction, ensuring that the milk is drawn out efficiently from the camel's udder while preserving the animal's health and comfort. By creating an optimal seal and maintaining steady suction, these liners help maximize milk yield and quality, supporting the overall productivity of the dairy operation.

Durability is another standout feature of these liners. Made from high-grade silicone, they exhibit excellent resistance to chemicals and abrasion, which are common challenges in livestock milking supplies. This resistance ensures that the liners maintain their integrity and performance even after repeated exposure to cleaning agents, disinfectants, and the mechanical wear and tear of daily use. As a result, these liners offer a long service life, reducing the frequency and cost of replacements.

In addition to their robust construction, the chemical and abrasion resistance of the liners contribute to maintaining hygienic conditions during milk extraction. The smooth silicone surface resists bacterial buildup and is easy to clean, ensuring that the milk collected remains uncontaminated and safe for consumption. This aspect is particularly important in maintaining high standards of dairy hygiene and complying with food safety regulations.

Overall, these Camel Milking Machine Liners represent a vital component in the category of livestock milking supplies, combining compatibility, comfort, durability, and functionality. Their design caters specifically to camel milking needs, with thoughtful attention to the unique requirements of camel teats and the demands of modern milking machinery. By investing in these high-quality liners, farmers and dairy operators can achieve more efficient milk extraction, improved animal welfare, and enhanced operational efficiency.

Whether you are upgrading your existing milking equipment or seeking reliable replacements for your milk extraction tubes, these milking machine suction liners offer a proven solution. Their compatibility with most standard milking machines, combined with their robust material properties and optimal sizing, makes them an indispensable tool in the field of livestock milking supplies. Ensure the best for your camels and your dairy operation with these premium camel milking machine liners designed for performance and longevity.

Features:

Product Name: Camel Milking Machine Liners

Length: 125mm

Designed specifically for camels to ensure optimal milk extraction

The silicone inner liner inside the teat cup sleeve directly wraps around the camel's teat for a secure fit

Function: Efficient milk extraction

Incorporates noise reduction technology to minimize milking noise

Compatible with various milking systems as a key component of camel milking components

Part of essential camel milking accessories for effective and comfortable milking

Also referred to as milking machine suction liners for improved suction performance

Technical Parameters:

Use	Camel Milking Machine Accessories
Noise Reduction	Designed To Reduce Milking Noise
Resistance	Chemical And Abrasion
Lifespan	Typically Lasts 4,500 To 5,000 Milkings
Installation	Easy To Install And Replace

Weight	51G
Length	125mm
Animal	Camel
Durability	High Wear Resistance For Extended Use
Function	Milk Extraction

Applications:

The Chuangpu HL-M15C Camel Milking Machine Liners are essential Dairy Milking System Components designed specifically for efficient and hygienic milk extraction. Manufactured in China, these liners are crafted to deliver exceptional performance and durability, making them an indispensable part of any modern milking operation. The silicone inner liner inside the teat cup sleeve directly wraps around the camel's teat, ensuring a comfortable and secure fit that facilitates smooth milk flow while minimizing stress on the animal.

These cattle milking components are particularly suitable for use in diverse livestock milking supplies setups, including commercial dairy farms, camel dairies, and specialized milking facilities. The HL-M15C model, with a lightweight design of only 51 grams, integrates seamlessly into existing milking machines without adding unnecessary bulk. This attribute is especially beneficial during long milking sessions where ease of handling and efficiency are paramount.

One of the standout features of the Chuangpu HL-M15C liners is their high wear resistance, which ensures a prolonged lifespan typically lasting between 4,500 to 5,000 milkings. This extended durability reduces the need for frequent replacements, thereby lowering operational costs and downtime. The robust material composition also guarantees resistance to abrasion and deformation, even under continuous use in demanding environments.

The primary function of these liners is to extract milk effectively while maintaining the teat's health and comfort. Their precise engineering allows for optimal suction and release cycles, which mimic the natural suckling action, promoting better milk yield and animal welfare. As a result, the HL-M15C liners are ideal for dairy farmers and livestock managers who prioritize both productivity and animal care.

In summary, the Chuangpu HL-M15C Camel Milking Machine Liners are a vital component of livestock milking supplies that enhance the overall efficiency of dairy milking systems. Their combination of lightweight design, high durability, and specialized function makes them perfect for various milking scenarios, particularly in camel milking operations where the silicone inner liner's direct contact with the teat is critical. Investing in these liners translates to improved milking performance, reduced maintenance, and sustained animal health.

PRODUCT DESCRIPTION

— .
IT IS HUNG ON THE SHOULDER OF THE COW OR THE ROOT OF THE HIND LEG TO PREVENT
THE UNSCRUPULOUS COW KICKER FROM CAUSING HARM TO THE BREEDER AND FACILITATING THE WORK OF THE BREEDER.

Made of premium selected silicone, this exclusive camel teat liner fits camel teats softly to avoid injury during milking. It delivers a service life of up to 5,000 milking cycles, compatible with most camel milking machines, an ideal replacement spare part for farms.
