## Product Description

### 3600\*1700\*2200 Feed Mixer Spreading Machine 5m<sup>3</sup> For Dairy Farm

#### Function of Feed Spreader , Feed Mixer Spreading For Cow:

Feed spreader main function is to directly throw in the finished feed ration area for once completed feeding, widely used in agricultural farming a reas and medium-sized farms and farm communities regulate feeding operation. After mixing various of pasture, straw, silage and other fibrous feed mixing , and then put those in the spreader car, and then make the spreading feeding operations. Easy to use, easy to operate, reliable product quality, durable, sprinkle material feeding process can be adjusted according to the density of the material users laps places livestock, high efficiency, saving time and labor-saving farm space.

Feed spreader for total mixed ration can enable carbohydrates, fat, Cellulose and other nutrients in the rumen be simultaneously used, for reproduction rate and yield vitamins rumen bacterial proteins can be greatly improved. Simplifying feeding procedures, reducing feeding randomness, so that greatly enhance the precision level management; implement clustering management, then with mechanical feeding, improve labor productivity, reduce labor rate costs.

#### The main structure of Feed Spreader , Feed Mixer Spreading For Cow:

The machine consists of two parts: motor tricycle (automotive) and feed spreading system components. Motor tricycle (automotive) is mainly engaged in the transport walking and spreading the material power, feed spreading system reply on the main conveyor and conveyor drive to complete the small feeding.

#### Operating principle of Feed Spreader , Feed Mixer Spreading For Cow:

When Feed spreader drives to the designated feeding place, firstly turn on the meter small transport control switch (left and Right), then turn on the big transport control switch and at the same starting spreader vehicles to make feeding. Turn off the big transport control switch when need stop feeding spreading, and then stop small transport control switch.

1. This machine uses agricultural tricycle for transporting, powerful but low-power, better trafficability;
2. Maneuverability is strong, with small turning radius, more flexible and convenient;
3. Reduce labor intensity and reduce feeding costs;
4. It can be spread on both sides, feeding more quickly and efficiently;
5. Feed spreading quickly, can adjust the feed rate spreading;
6. The overall hydraulic drive , with failure low and easy maintenance;
7. Canopy cab or fully enclosed cab control of all drives;
8. The high-pressure pipe connections, no oil leakage;
9. Batch putting forage for cattle and sheep farm feeding grouping, for all size pastures;
10. Can be customized for weighing systems;
11. The small spreader is more suitable for stationary mixing plants, low fuel consumption, high efficiency and speed;
