Basic Information

- Place of Origin: Jiangsu China(Mainland)
- Brand Name: CHUANGPU
- Certification: ISO
- Model Number: HL-MP23A
- Minimum Order Quantity: 1pcs
- Price: USD\$0.70-USD\$1.30/PCS
- Packaging Details: CARTON
- Payment Terms: Western Union, MoneyGram, T/T, L/C
- Supply Ability: 10000SET/MONTH

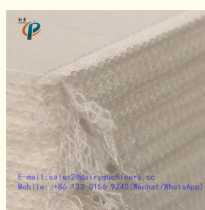

Product Specification

- Material: FDA Chemical Fiber Non-woven Fabrics
- Application: Dairy Farm Milking Parlor
- Farm Animals Type: Cattle
- Type: Milking System
- Usage: For Filtrate Milk
- Use: Glass Milk Meter/Waikato Milk Meter Spare Parts
- Highlight: **veterinary medical instruments, cattle hoof trimming discs**

Product Description

Product Model Number: HL-MP23A
Product Name: Non-woven Fabrics Milk Filters
Product Material: FDA Chemical Fiber Non-woven Fabrics

Description:

Filter paper is a medium to filter milk, which can effectively filter the milk, the effective removal of impurities in milk, etc., in addition to the process of milking impurities, such as air or milk, the dairy will fall some of the body Particles and dust, to ensure that the cleaning, improve the quality of milk.

Modern pasture milk production for milk filtration put forward higher requirements, high quality milk filter paper must have a certain physical characteristics, the choice of filter paper must have the correct size and capacity, with the milking equipment and the size of the needs of cattle match.

Feature:

- 1) high wet strength;
- 2) uniform pore size and distribution;
- 3) strong joints;
- 4) dimensional stability;
- 5) This product is made of food grade non-woven fabrics, safe and non-toxic, with the rest assured;
- 6) This product variety of different specifications for customers to choose.
- 7) We are a professional manufacturer, can be customized according to the size of customer needs.

Farm Animals Type	Cattle/Cow/Horse/Camel etc
Application	Milking Parlor spare parts

The importance of using milk filter paper

The milk must be filtered through the milking equipment filter paper before it is squeezed into the milk storage equipment, and then disinfected at the factory production and processing, and then packaged. Therefore, normal drinking bags, bottles, and cups of milk do not need to be filtered, and can be directly consumed. However, the milk that has just been squeezed out is only disinfected. If it has not been filtered by the filter paper of the milking equipment, it is not drinkable. Milking equipment filter paper can effectively remove the impurities generated during the milking process, such as a particle or dust falling from the air, milk bucket or cow, which is a necessary process before milk processing.
