Instructions for use

In the delivery of cattle, it is inevitable that the yak will not be able to give birth properly. If the correct treatment is not taken, it will cause significant economic losses to the owner. At this time, it is necessary to use the midwifery chain to help the cows to produce smoothly. The entire midwifery chain consists of two parts – the hook and the chain. The purpose of the hook is to drag the cow as a handle when the cow is difficult to produce. The midwifery chain made of stainless steel is not only non-toxic, but also easy to operate and easy to carry. It helps the cows to give birth and ensure the safety of the mother and calves.
